Open Application | Innovation, Technology & Strategy

September 2026

Dear Hiring Manager,

Some cover letters begin with enthusiasm for a particular vacancy. This one begins deliberately more honestly: I am looking for a role connecting innovation management and technology with strategy and finance. ccvl also serves as a product demo of how I structure, measure and rigorously review applications.

At CENVION, I introduced Claude and RAG-based search into investment and reporting workflows. For seven battery-storage assets, I modelled IRR, NPV, DSCR and sensitivities to support refinancing packages and decisions for institutional investors, and automated the data flow from operating data to quarterly reports, surfacing performance gaps and operational improvement levers directly. That tied emerging technology to capital decisions, risk transparency and a dependable portfolio view.

At Airbus, I translated 20+ years of safety-critical maintenance data across 500+ aircraft into decision-ready risk and cost signals, surfacing EUR 100k+ in annual savings and helping trigger an international improvement programme worth more than EUR 1m. At Swisscom, I then modelled cloud economics and infrastructure choices under data-centre constraints, supporting eight-figure investments and supplier negotiations exceeding CHF 10m; the pattern is evidence specialists and leaders share.

- 1 Innovation & Technology | Agentic AI, cloud systems and 50+ open-source projects
- 2 Applied AI & Data | RAG search, ML risk analysis and intelligent automation
- 3 Strategy & Transformation | SteerCo decisions, TOM and operational delivery
- 4 Finance & Investment | Project finance, DCF, portfolio and scenario analysis
- 5 Entrepreneurial Delivery | Consulting across four markets and end-to-end project P&L

This is not a linear specialist profile – and that is precisely where its practical value lies for a team: I can build a prototype myself, test its technical viability and explain the problem it solves at the same time. I connect that understanding to the business case, decision risks and the route from an idea into delivery. Where disciplines otherwise lose momentum at handovers, I join technology, strategy and finance into one decision base that remains accessible to leaders and credible to the specialists responsible for execution.

For a real application, this is where specific company fit belongs: a strategy, initiative or challenge that genuinely attracts me – researched and understood rather than praised with interchangeable language. It then connects that need to my experience and offers a concrete picture of the contribution I could make. This public version remains deliberately open: if your team wants to implement innovation hands-on and translate it into commercial decisions, that combination may be worth exploring together.

If you see a possible fit, I would welcome an open conversation about your questions, my experience and the work where I could genuinely help your team. Thank you for taking the time to consider this unusual open application – I would be glad to learn more about you, your organisation and the problems ahead.

Yours sincerely,

Julian Yves Richard Corbet
