Open Application | Innovation, Technology & Strategy

September 2026

Dear Hiring Manager,

I am looking for a role connecting innovation management and technology with strategy and corporate finance. The examples below show how I bring these disciplines together in investment analysis, infrastructure and applied AI. ccvl is also a working demonstration of how I structure, measure and review applications.

At CENVION, I introduced Claude and RAG-based search into the team's investment and reporting workflows. For seven battery-storage assets, I modelled IRR, NPV, DSCR and sensitivities to support their refinancing packages and investment decisions for institutional investors, and automated the data flow from operating data to quarterly reports, making performance gaps and opportunities for operational improvement easier to identify. That tied emerging technology to capital decisions, risk transparency and a dependable portfolio view.

At Airbus, I translated more than 20 years of safety-critical maintenance data covering more than 500 aircraft into decision-ready risk and cost signals, identifying over EUR 100k in potential annual savings and helping trigger an international improvement programme worth more than EUR 1m. At Swisscom, I then modelled the cloud economics and infrastructure choices under data-centre constraints, supporting eight-figure investments and supplier negotiations exceeding CHF 10m. Both gave leaders and specialists a shared decision base.

- Innovation & Technology | Agentic AI, cloud systems and 50+ open-source projects
- Applied AI & Data | RAG search, ML risk analysis and automated investment reporting
- Strategy & Transformation | SteerCo decisions, TOM and operational delivery
- Finance & Investment | Project-finance models, DCF, portfolio and scenario analysis
- Entrepreneurial Delivery | Consulting across four markets and end-to-end project P&L

My experience connects technical implementation with investment analysis and the decisions that turn ideas into delivery. I can build a prototype myself, test its technical viability and explain the problem it solves. This technical understanding informs the business case and the risks I discuss with the people responsible for the decision. I bring technology, strategy and finance into a shared decision base, helping leaders and specialists assess the same evidence, compare their options and understand what execution will require.

In a tailored application, this paragraph links a specific company strategy, initiative or challenge to the evidence above. It explains why the opportunity interests me and where my experience would be relevant, drawing on research into the organisation's needs. This public version leaves that choice open: I am interested in teams that want to implement innovation and assess commercial value. If you are weighing a technology investment or moving an idea towards delivery, that combination offers a useful basis for discussion.

If a project or role calls for this combination, send me a short outline by email and suggest a time to speak. We can use a first conversation to discuss the decision you face, the work involved and how my experience could help. Thank you for considering this open application; I would welcome the chance to discuss your priorities.

Yours sincerely,

Julian Yves Richard Corbet
